

## An Integration Framework for Multiple Tools

Clients engaged in decision analysis often want to experiment with the capabilities of different products to find the best solution. This can prove challenging. In order to eliminate the distraction of navigating through different user interfaces and disparate methods for exploiting data and deriving insights, Eastport developed the Tools Harness.

The web-deployable user interface of Tools Harness provides an integrated view of multiple off-the-shelf and open source analysis tools. By gaining direct experience with specific capabilities on a trial basis, our clients can explore and analyze data from multiple perspectives before making any final decisions on the right solution for their specific requirements.

### Rapid Prototyping for Agile Solutions

The Tools Harness' drag-and-drop functionality allows clients to manipulate their own data between multiple applications using a common interface. Behind the scenes, the Tools Harness takes care of the integration between the different applications, moving data from one tool to another and acting as the glue between the disparate tools. As a result, clients can see how a particular

set of capabilities can provide answers to their questions on the spot. The Tools Harness quickly gets representative working solutions into users' hands.

### Intuitive Interface Unites Disparate Tools

The ability to quickly generate pilot solutions from disparate tools significantly empowers our clients, allowing users to gain insights that might otherwise remain buried in the tremendous volume of data they are tasked with interpreting.

The Tools Harness allows clients to explore different capabilities through our hands-on development process, and see how their solution evolves -- often through multiple prototypes. This hands-on approach illuminates nuances that might have otherwise been missed, providing clients with additional perspectives to inform deployment decisions.

**“Eastport’s Tools Harness allows us to ‘try before we buy’ and really understand what tools are right for our enterprise. When making hefty investments in technology, the ability to test drive solutions is invaluable.”**

“Eastport Analytics understands the client’s needs rather than imposing technology that may or may not be appropriate for the staff to implement or maintain.”

“Eastport Analytics delivers insight, innovation and creativity...taking data and looking at it in different ways.”

## Some of Our Capabilities Available in Tools Harness...

- Faceted Search
- Search Visualization
- Content Management
- Text Mining
- Entity Extraction
- Concept Clustering
- Categorization
- Word Frequency Analysis
- Link Visualization
- Geo-Coding
- Geospatial Visualization
- Social Network Analysis
- Structured Argumentation
- Alternative Competing Hypotheses (ACH)
- Digital Product Creation

## About Eastport

Eastport Analytics helps organizations make better decisions, blending sophisticated technologies with agile integration practices to develop innovative solutions which open up the “realm of the possible” for our clients. As a result, our clients walk away with actionable insights which yield practical, repeatable and defensible answers to real mission problems.
