

eastportanalytics

Eastport Analytics helps analysts deliver better insights to decision-makers by helping their organizations evolve capabilities and processes related to analysis and critical decision making activities. Our current client base spans the Department of Homeland Security, Treasury, law enforcement, the intelligence community and the commercial arena. We create client-tailored technology-enabled analytic processes that repeatedly facilitate the efficient discovery of stronger evidence from diverse sources of data; yield more complete and defensible findings through explicit reasoning over that evidence; and engage the intuition of analysts to discover uncommon insights.

We hire outstanding individuals and provide them the leadership, incentives and resources to make good things happen for our clients and for themselves. We seek highly motivated and resourceful individuals to fill challenging positions in a work environment that emphasizes and fosters creativity, achievement, enjoyment and professionalism.

Solution Analyst

We are currently seeking Solution Analysts who will work closely with Eastport Engineers and investigators, analysts and other operational users to gather, analyze, develop and communicate a common understanding of client-required decision analytic capabilities. You will:

- Be a problem-solver that collaborates with a project team to help shape the solution that will meet our clients' mission challenges and rapidly get required capabilities into their hands.
- Identify the core business issues, critical success factors and thoroughly grasp the operation constraints imposed by the client organization.
- Work with client analysts or knowledge workers to augment their capability for analyzing available information.
- Prepare written business correspondence (i.e., concept papers, proposals, status reports) that is coherent, grammatically correct, effective, professional and engaging.
- Work collaboratively with your team and the client to improve upon existing approaches by seeking opportunities to creatively transform current practices into fresh alternative solutions.

Required Experience, Education, and Skills

- 5+ years of successful, progressive experience as a business or information analyst in support system development and implementation efforts.
- BA/BS in Business, Computer Science, or a related discipline.
- Strong business analysis skills, including a thorough understanding of how to capture customer business needs and communicate them to engineering teams.
- Knowledgeable of the state-of-the-art in a broad range of analytic processes and methods for information exploitation and decision support.
- Excellent verbal and written communication skills and the ability to interact professionally with a diverse group including executives, managers, and SME's.
- Ability to elicit and document conditions, functionality, and challenges of customer to enable problem solving using a variety of techniques and methodologies.
- Secret Clearance minimum requirement; candidate must be eligible for a Top Secret Clearance, (i.e., be a United States Citizen and meet the standards of a government background investigation – criminal and financial).
